EXAMINER

HEINRICH, SAMUEL M

ART UNIT PAPER NUMBER

1725

DATE MAILED: 08/18/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/507,326	Applicant(s) OTSU ET AL.	
	Examiner Samuel M. Heinrich	Art Unit 1725	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-6,8-14,16 and 21-24 is/are pending in the application.
4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-6,8-14,16 and 21-24 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 10 September 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-6, 8-14 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 6,407,360 to Choo et al in view of USPN 5,513,195 to Opower et al and in view of USPN 5,705,788 to Beyer et al and in view of any of USPN 7,058,093 to Kennedy et al or USPN 5,763,853 to Shimomura et al or USPN 4,120,582 to De Vries et al. Choo et al describe laser cutting of brittle material with a laser including sensing means. Opower et al describe the application of laser energy to work via a bundled fiber system. Beyer et al describe well known measuring of the light distribution in a bundled fiber laser system. The use of bundled fiber laser components

in laser cutting would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the bundled fibers are adaptable to many shapes and provide simplified tool setup. Substitution of a measuring and control device for a fiber bundle system in place of the measuring and control device described by Choo et al would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the fiber bundle distributes light in an array. Sensing and measuring both reflected light and light transmitted through a workpiece is well known in the art. See Kennedy et al (column 28, lines 2-28), Shimomura et al (column 21, lines 54-63), and De Vries et al (Abstract); all describe both reflected and transmitted light sensing. The use of both reflected and transmitted light for control in cleaving would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the data provides good control.

Claims 6, 8, 14, and 16 are rejected under 35 U.S.C. 103(a) as being anticipated by USPN 6,888,853 to Jurgensen in view of USPN 6,086,366 to Mueller et al and further in view of US20030074096 to Das et al and in view of any of USPN 7,058,093 to Kennedy et al or USPN 5,763,853 to Shimomura et al or USPN 4,120,582 to De Vries et al. Jurgensen describes (e.g., Figures 4 and 20-37, column 37, line 38+) apparatus comprising plural light sources, plural optical fibers, scanning means, position moving means, and control means which meet the structural limitations of the instant claims. Mueller et al describe (column 1, lines 52-57) control of intensity of radiation in the ablation region and describe (column 3, lines 12+) using a reflected measurement beam

Art Unit: 1725

for process control. Das et al describe (claims 19, 21, and 37) well known feedback from an emissivity measuring pyrometer for laser power control. The use thereof in the Jurgensen apparatus would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the spot control is known in Jurgensen and because light intensity measuring means is known as disclosed by Das et al for controlling laser beam application. The intended use of the apparatus, for cutting brittle material, does not impart patentability to the apparatus claims. Jurgensen describes (column 37, last five lines) the well known modulation and shaping control of the processing spot. Sensing and measuring both reflected light and light transmitted through a workpiece is well known in the art. See Kennedy et al (column 28, lines 2-28), Shimomura et al (column 21, lines 54-63), and De Vries et al (Abstract); all describe both reflected and transmitted light sensing. The use of both reflected and transmitted light for control in cleaving would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the data provides good control.

Claims 1-5, 9-13, 19, and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP410034364A in view of JP2001228449 and further in view of US20030074096 to Das et al and in view of any of USPN 7,058,093 to Kennedy et al or USPN 5,763,853 to Shimomura et al or USPN 4,120,582 to De Vries et al. JP410034364A describes splitting brittle material by applying plural beams having different characteristics. JP2001228449 describes the use of bundled optical fibers in a laser machining device. The use of the selective beam application with a fiber optic

Art Unit: 1725

bundle used for intermediate delivery of plural beams for brittle material splitting would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the bundled beam delivery provides an efficient delivery of the plural beams. Das et al describe (claims 19, 21, and 37) well known feedback from an emissivity measuring pyrometer for laser power control. The use thereof in the brittle material splitting methods and apparatus would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the variable spot control is known and because light intensity measuring means is known as disclosed by Das et al for controlling laser beam application. Sensing and measuring both reflected light and light transmitted through a workpiece is well known in the art. See Kennedy et al (column 28, lines 2-28), Shimomura et al (column 21, lines 54-63), and De Vries et al (Abstract); all describe both reflected and transmitted light sensing. The use of both reflected and transmitted light for control in cleaving would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the data provides good control.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Caldwell et al, Berkovic et al, Bogart et al, Crosby, and

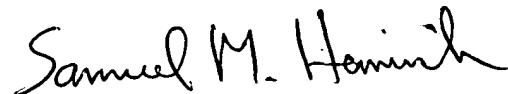

Art Unit: 1725

Otsubo et al all describe measuring light both reflected and transmitted through an object.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Samuel M. Heinrich whose telephone number is 571-272-1175. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, P. Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
